REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: None of the prior art references, singly or combined, teaches or suggests conductive particles comprising three components (1) base particles, (2) conductive particulate core to form projections on the base particles, and (3) a conductive coating over the projected base particles wherein the conductive material of the core is different from the conductive material of the coating.
2. The Japanese patents JP-04-03692 and JP 08-55514 teach electroconductive particles comprising a base particle, protrusions formed by smaller particles adhered to the surface of the base particle, and a coating of conductive material. However, the particles formed on the surface of the base particles (i.e. forming protrusions) are not conductive material as required in the instant claims.
3. The Wakiya patent (US 7,291,393) teaches conductive particles comprising a core material, projections and a coating film. However, the projections are formed by the uneven surface of the core material not from particulate material formed on the surface of the core. The Oyamada patent (US 6,770,369) teaches conductive particles with projections; however, the projections also form the coating on the particles; that is the conductive material for the projections and the conductive material of the coating are the same.
4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
